

LIVESTOCK SALT LICK BLOCKS

PURESALT

Salt is a crucial daily essential mineral for a multitude of bodily functions such as growth, fertility, milk production, muscle contraction, appetite, the nervous system, bodily fluid balance, acidity, digestion, glucose transportation and immune resistance. This block contains only pure natural solar sea salt and comprises over 99.5% sodium chloride with a little calcium, magnesium, sulphur and iron as found naturally in the salt.

COBALT

Cobalt helps to synthesize vitamin B12 which aids in red blood cell production, as well as assisting with metabolism, reproductive growth and development, and nervous system maintenance. With all the benefits of pure salt as well as the addition of cobalt to meet these needs, animal condition, fleece and appetite should improve as well as the immune system so assisting also with stress and worm count.

SULPHUR

Adding sulphur to the pure salt block has many advantages. Sulphur assists with the growth of rumen bacteria so helps the body to break down food and absorb vitamins as well as aiding with digestion problems such as diarrhea, constipation and other stomach upsets. It reduces the risk of prussic acid poisoning. Sulphur improves milk yield so excellent for lactating mothers and dairy cattle. It assists with the production of amino acids, skin, tendon and ligament health.

SELENIUM

Selenium added to the other benefits of pure salt assists in fertility, reproduction and growth. It can reduce the occurrence of stillbirths and weak newborns. It also aids the immune system and prevents fatigue and muscle weakness.

TRACEMIN

This salt lick will assist with meeting not only daily salt requirements but will also supply appropriate levels of a multitude of minerals for optimum health, including zinc, manganese, copper, iodine, selenium, cobalt, calcium and magnesium. Aside from gaining all the benefits provided by salt and the additional minerals, livestock will have safe dosages of these minerals, as their natural salt intake will prevent over-dosage.

ANISEED

Star anise has a distinct liquorice-like taste and smell which is an excellent attractor for game animals to bring them to a watering hole, for hunting, or to guide them to a location.

TANNINSTOP

With added polyethylene glycol, this block assists during dry conditions to enable animals to digest leaves that are high in tannin. This allows for more protein absorption. The product is suitable for ruminants only. Water must be provided near the salt lick block.

ALOE

Aloe ferox is more concentrated than aloe vera and is indigenous to southern Africa. Aloe strengthens the immune system, is an antioxidant, anti-inflammatory and antiseptic substance and prevents infections. Aloe assists with wound healing, intestinal health, constipation and muscle and joint functioning. It is also said to act as a tick and flea repellent.

PHOS

Many areas are low in naturally occurring phosphorus in the soil and vegetation. Phosphorus is an important mineral for reproduction, cell development and body growth, and for building teeth and bones. It helps with metabolising fat, carbohydrates and protein, increasing muscle strength and weight gain. This block contains a high proportion of phosphorus balanced with calcium and is fortified with additional zinc, manganese, copper, iodine, selenium, cobalt and magnesium.

GARLIC

The Garlic block contains real garlic extract to a level that can help repel flies, fleas and even ticks. Garlic is anti-inflammatory, anti-fungal, antiviral, antibacterial and an antioxidant, assists with blood pressure, digestion, detoxification, heart and bone health.

PROVIDE ACCESS TO CLEAN DRINKING WATER

HORSE LICKS

PURESALT

Salt is essential for muscle contraction, the central nervous system, heart health, fluid balance and digestion. The PureSalt block contains 99.5% natural solar sea salt with the bonus of a little calcium, magnesium, sulphur and iron as found naturally in sea salt.
